

Electronic Patient Record (EPR)

At the core of the KS Medical Suite is the Electronic Patient Record (EPR) - this is a structured digital record of all patient demographic information and a full history of patient event and state information across all clinical and financial activities.

Software Features include:Â

- Facilitates easy distribution of patient information directly to point of care
- Enhances Control over Data Quality
- Fast and user-friendly searching criteria
- Configurable role and profile enabled access to data
- Delivers full view of patient episode history and all planned future patient visits and activities.

Rich information provided by seamless integration with the following application modules:

- Accident & Emergency / Emergency Room
- Patient Admission, Discharges and Transfers
- Order Entry and Results Distribution
- Financial Management Modules
- Radiology Information System and PACS
- Laboratory Information
- Maternity,Â Labour Ward and Neonatology
- Physiotherapy
- Day Ward
- Outpatient Clinics
- Open Integration (API/SDK) with 3rd Party Vendors
