

## Physiotherapy goes live in HSE North East Area Hospitals

KSI Physiotherapy goes live in HSE North East Area Hospitals

17 Jan 2008

Keogh Software has completed the implementation of its Physiotherapy Management System across all of the acute hospitals within the Irish Health Service Executive - North East Area.

Mongaghan General Hospital today joins Cavan General Hospital, Our Lady's Hospital Navan, Louth County Hospital, and Our Lady of Lourdes Hospital Drogheda in implementing the Keogh Physiotherapy Management System.

The Keogh Physiotherapy Management System is a specialised clinical workflow management software solution that has been developed for use by Physiotherapy professionals to assist in their daily information management requirements. The key components of the solution are Electronic Patient Record Management, Clinical Document Management, Appointment Scheduling, Management Information and Performance Reporting and seamless integration with all other modules provided as part of the Keogh Software Medical Application Suite.

The system provides direct linkage to the Keogh Radiology, Accident & Emergency, Billing and Integration solutions already deployed throughout the region. In addition, the open standards strategy employed by the system gives the HSE North East Area rapid delivery of a proven working business solution today, yet future-proofs the investment with a clearly outlined roadmap for future development requirements.

We extend sincere thanks to the HSE Service Teams that have worked with our Client Services team throughout this complex multi-site and multi-disciplinary project, and we are happy to report that the project has been delivered successfully on time and well within a modest budget.

For further information or to request an on-site software demonstration please email our sales team [sales@keogh-software.ie](mailto:sales@keogh-software.ie)
