

Radiology Information System - Update

Radiology Information System Version 2.12.5 - Maintenance Release

31 Jul 2009

Keogh Software is pleased to announce the immediate availability of Radiology Information System v2.12.5.

Feature Highlights:

new Full DICOM Worklist & MPPS support

new Consultant Public / Private Mix Analysis Report (View Sample Report)

new Automatic Fax Delivery of Diagnostic Results

new Automatic Electronic Delivery of Diagnostic Results via Healthlink

new Order Communications & Remote Request Management

new Desktop Integration with all leading PACS & Speech Recognition Vendors

new Full KSI Enterprise PACS integration

new Full KSI Clinical Suite integration

new Microsoft Windows 2008/Vista/XP/Windows 7 (RC) Support

new Document & Request Scanning and Secure Clinical Storage Server

new Database Replication & Journalling Support with IB 2009 (SMP)

new Enhanced Security & Active Directory Integration Option

new Integrated Online Monitoring & System Healthcheck Facility

new Open Integration & API Framework

In addition to these features there are many performance enhancements and some minor bugfixes. Customers are reminded that v2.12.4 is a critical system update and remains the minimum supported version of RIS.

Keogh Software is a wholly Irish owned software business providing cost-effective healthcare information system solutions since 1986.
